

Sabroe® products 2015

Full satisfaction – no surprises

Sabroe® products are recognised and respected throughout the world for their build quality, long-term operating reliability and cost-effectiveness.

You – and your customers – also reap the benefits of our consistent focus on low life cycle costs and world-leading expertise in the use of naturally occurring refrigerants.

The Sabroe brand has been in the business of industrial cooling and heating ever since 1897. We’ve proved we can repeatedly and consistently deliver on our customers’ requirements – no matter how big and complex, or how small and straightforward.

We listen to what your real challenges are, and what you really want – and need. And then we focus well over a century of specialist knowledge on how best to achieve it.

Part of Johnson Controls

The Sabroe® product brand is owned by Johnson Controls Denmark ApS.

We are part of the Building Efficiency division of Johnson Controls, enabling us to provide Sabroe customers with a comprehensive range of products, systems and services for meeting heating, ventilating, air conditioning and refrigeration needs in industrial, commercial and residential buildings of all kinds.

Sabroe® products – the big difference

The equipment you need – now and in the future

We provide the equipment you need to put thermal transfers to work in industrial and commercial installations – from a full spectrum of refrigeration compressors of all kinds to industrial chillers and heat pumps.

Sabroe systems are designed to be versatile and future-compatible, making it easy for you to repurpose, retrofit, expand and upgrade your installations and your thermal management capabilities, whenever the need arises.

Documented capabilities and performance

When you sign up for Sabroe solutions and equipment, we make sure you know exactly what you're getting. You don't just get average performance figures – you get exact, documented capabilities for your particular set-up, as tested at the state-of-the-art Sabroe test centre in Denmark, prior to delivery.

Full satisfaction – no surprises

We're committed to full transparency and helping our customers as much as possible. That's why we also use the same data and documentation in all subsequent Sabroe calculations about your set-up.

We document everything – and share the results with you and your staff, so there are no unwelcome surprises and you can put our specialist know-how to best possible use.

Know-how steers you away from risk

Reap the full potential of your equipment purchases

In the world of industrial refrigeration, the equipment you buy – whether standardised or individually customised – is just part of the overall picture.

You only reap the full potential of your equipment purchases when they are effectively integrated into your existing set-up and when all the operating parameters are fine-tuned to ensure you maximum cost-effectiveness.

Prevention is better than cure

With way over a century of heavyweight practical experience in everything even remotely related to industrial refrigeration compressors, Sabroe experts know pretty much all the on-site pitfalls, glitches and bottlenecks likely to occur.

This means that when you specify Sabroe equipment, you get more than you'd normally expect.

Our unique combination of market-leader expertise and first-mover technology capabilities means we know how to help prevent difficulties and downtime, rather than spending time and money dealing with them once they've cropped up.

Intelligent control opens up new opportunities

Cranking up practical value – boosting payback

Top-notch refrigeration set-ups depend heavily on the systems that control how they react to operating conditions and carry out their designated functions.

It's often the control systems that really determine the return on investment and practical, money-earning value.

Electronic advantages

Sabroe brings you the big benefits of world-leader expertise in all the nitty-gritty aspects of industrial refrigeration, seamlessly integrated from the same specialist manufacturer.

Sabroe electronic control and monitoring systems enable you to leverage the usefulness of your compressors, chillers and heat pumps, and to integrate them into industry-standard monitoring and control systems.

Information for better decisions

Data acquisition tells you exactly what's going on in your thermal transfer equipment and your primary processes – and enables you to match the work done to your exact needs at any given time.

Linking everything together

Seamlessly integrated, future-compatible control systems based on open architecture and industry-standard formats are crucial for the energy-efficient use of virtually all thermal transfer systems and equipment.

Better control means better results, and better results mean better return on investment.

The Unisab Event app enables you to keep tabs on everything going on in your refrigeration plant

Life cycle costs – an equation with many parts

Dealing with the real agendas

Sabroe experts have the practical experience to ask bang-on questions about what your company really needs. This often involves balancing lots of different parameters. That's why we can help you do the sums that give you the most cost-effective solution for your company's specific requirements.

Keeping costs down

The real cost of heating and cooling equipment stretches far beyond the purchase price, accumulating throughout its life cycle.

Everything about Sabroe compressors, chillers and heat pumps focuses on keeping your costs down – from delivery, commissioning and operations to service, retrofit and disposal.

From expenditure to benefits

The energy your system uses is the most important factor – by far – in determining your total cost of ownership. Even minor alterations in energy efficiency can mean a world of cost/benefit difference.

That's why Sabroe focuses on the complete picture – the life cycle costs (LCC) of your whole set-up – instead of just initial purchase costs.

This shifts your thermal transfer systems from being an expense to a benefit – with a visibly positive effect on operating costs, process effectiveness and final results.

Operating costs

- Service costs
- Investment costs
- Energy costs

Natural refrigerants make good sense

GWP
4000

The sums add up – and then some

Johnson Controls has profound experience in all kinds of refrigerants for various applications.

Sabroe industrial cooling and heating solutions put focus on natural refrigerants, such as ammonia, carbon dioxide, air and water, as well as hydrocarbons.

Balancing pros and cons

But we're not fanatics, and we're careful to listen to your needs and preferences. The pros and cons are rarely straightforward.

For example, up to 95% of the carbon footprint of refrigeration installations normally stems from fuel used to run them – not from the refrigerant. This has to be included in any realistic "big picture" calculations.

Thermal qualities count

But the fact is that natural refrigerants often make good financial sense simply because of their thermal efficiency.

In some applications, using natural refrigerants (such as ammonia), you can save 30% on energy costs – adding up to major savings in through-life operating costs.

Health and safety matter

We are fully aware that naturally occurring refrigerants may pose a risk that needs to be factored into your equations.

But Sabroe experts can help you deal with such issues, using relatively straightforward mandatory safety measures, and drawing on oodles of Sabroe practical experience.

Legislation dictates

Technical calculations may lead to one conclusion, while legislations may lead to a very different equipment configuration.

Whatever we technicians may prefer, it's pretty clear which way the wind is blowing for the rules we have to abide by. That, too, has to be factored in.

The advantages of using naturally occurring refrigerants

- Very energy-efficient
- No supply scarcity
- Low risk of prohibitive legislation or punitive duties
- Increasingly insisted upon throughout the industrial and consumer supply chain
- Available for virtually all kinds of industrial refrigeration.

Long service life saves you money

Tested to ensure reliability

Sabroe products and systems are renowned for exceptional reliability and technological advantages, backed by our ability to meet even the most demanding customer requirements.

One of the big advantages of doing business with Sabroe is that our compressor, chiller and heat pump products are all systematically tested before delivery. This ensures rapid, glitch-free commissioning and a bare minimum of interruption to your operations.

Industrial Refrigeration Parts Centre – global sourcing

The Industrial Refrigeration Parts Centre provides round-the-clock post-delivery support services that enable operators of Sabroe equipment to maximise return on investment and ensure the long-term stability of their operations.

Making the most of a supremely effective worldwide logistics infrastructure and rapid-response inventory management, the Parts Centre dispatches any part to wherever in the world it may be needed, within just 24 hours (if the part is in stock).

The extensive specialist knowledge available from the Industrial Refrigeration Parts Centre helps you

- identify minor malfunctions before they develop into major problems
- prevent unnecessary and expensive breakdowns
- cut operating costs by ensuring greater efficiency
- update your equipment and streamline your operating procedures
- extend the service life of your Sabroe equipment and installations.

AfterMarket Solutions (AMS)

Our AMS facility makes it supremely easy for you to source remanufactured compressor blocks to replace worn blocks, or have your own existing compressor blocks overhauled or repaired.

This facility is the overhaul, repair, re-manufacturing and stock centre for Johnson Controls industrial refrigeration companies throughout the world.

Control systems for every requirement

Matching operations to conditions

One of the most effective ways to improve the overall efficiency of your refrigeration setup is to make sure your processes and operations are always in tune with constantly changing operating parameters and equipment status, as well as unpredictable weather and climate conditions.

Sabroe data communication technologies, monitoring systems, control software and sensors combine to help you leverage the effectiveness of all kinds of HVACR systems, as well as the industrial processes and commercial services of which they are a part.

This then enables you to improve the energy efficiency of your operations, reduce your operating costs and boost your return on investment.

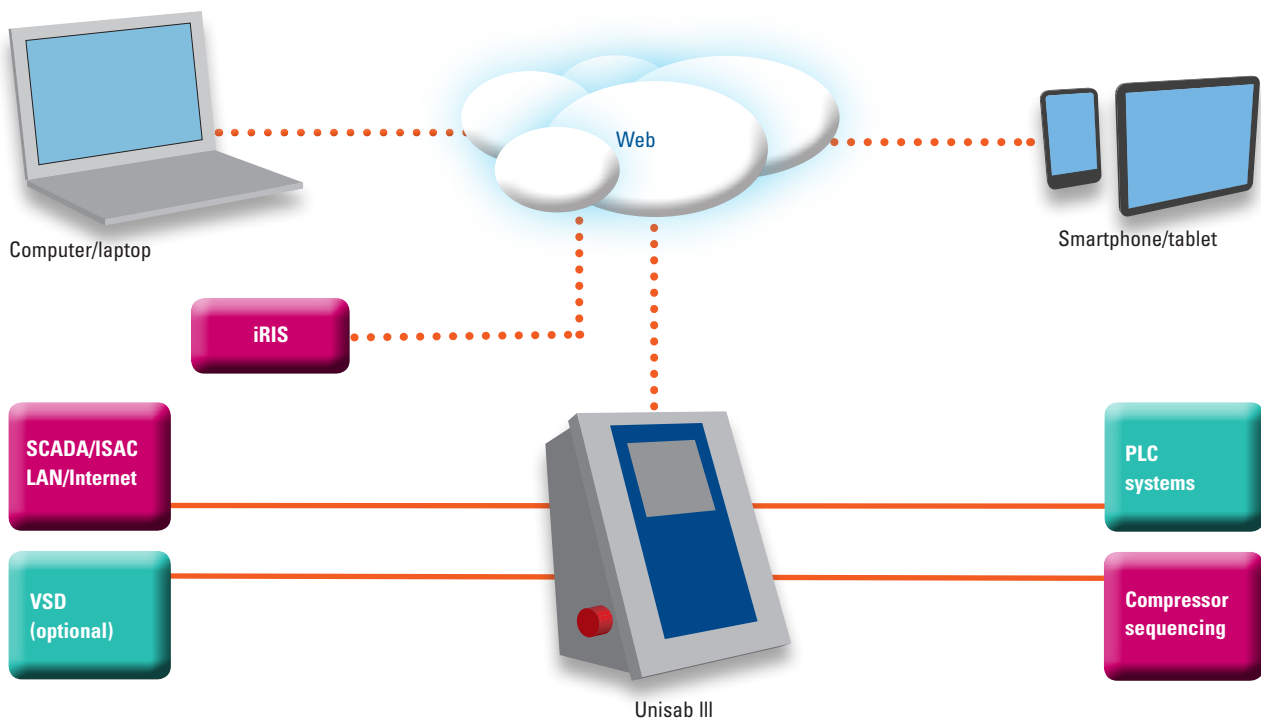

Sabroe Unisab III

Integrated systems controller for refrigeration compressors, chillers and heat pumps

Unisab III systems controllers are connectivity hubs that help make sure refrigeration installations have the best possible performance, maximum uptime and lowest possible operating costs.

These important control units are pre-equipped and pre-configured with the connectivity equipment and protocols necessary for monitoring and controlling a wide range of compressors, compressor packages, chillers and heat pumps – as well as using this data for fault-finding and analysis.

Advantages

Benefits

Single, fully integrated control system for use with virtually all types of compressors and chillers

Ensures more effective monitoring, control and diagnostics of a wide range of key refrigeration installations

Easy to integrate into the vast majority of industrial control systems, providing seamless transfer of data between systems

Ensures effective management of important operating data and secures the production process for best performance

Monitoring, control and diagnostics capabilities combined in one compact, integrated unit

Does away with the need for multiple systems, resulting in significant equipment savings

Compressor sequencing and load sharing are possible without additional equipment

Keeps power consumption to a minimum and reduces operating costs

Intuitive, easy-to-use interface, with a consistent “look and feel”

Requires fewer operator skills, resulting in lower training costs

Unisab Event apps are available for both iOS and Android devices

Connectivity

The Unisab III systems controller has normal industry-standard communication ports fitted as standard, and therefore does not require additional communication gateways.

Data can then be made available via any kind of network, where virtually any computer can be used to monitor and operate the Unisab III systems controller.

Functionality

- Service on demand schedule
- Unisab app for smartphone
- Configurable for both screw compressors and reciprocating compressors, with or without variable-speed drive (VSD), and using any refrigerant
- Built-in regulation of suction pressure, water temperature, discharge pressure, etc.
- Limitations on suction pressure, discharge pressure, motor current, etc.
- Logging of operating history and profiles for effective fault-finding and diagnosis
- Email dispatch in case of alarm or shut down.

Retrofit

A wide range of Unisab III retrofit kits are available to provide all the advantages of upgrading a wide range of existing compressors to a modern controls standard for improved performance and control system integration.

Connectivity	Multiple communication ports, including Modbus TCP, Profibus DP and Sequence Bus, as standard
Smartphone app	Available for both iPhone and Android devices
Sequencing.	As many as 14 refrigeration compressors, chillers and heat pumps of different makes and types can be linked in sequence, to ensure effective load sharing and capacity optimisation
Diagnostics.	Detailed operating data documenting 30 shut-down situations
Refrigerants	Pre-loaded with the requisite data about all refrigerants normally used
Operating languages	Multiple languages available as standard, with additional languages as options
Enclosure.	IP54
Ambient temperature	0–55°C
Power supply.	85–250 volt AC, 50–60 Hz
Dimensions (H x W x D)	380 x 300 x 210 mm
Weight	6.5 kg

Sabroe CP Optimiser

Automatic device for balancing R717 condensing pressure against compressor efficiency

Many refrigeration systems that use R717 (ammonia) as refrigerant and feature an evaporative condenser are operated using a fixed set point to maintain a constant condensing pressure. This is rarely ideal, as the energy consumption of the compressors typically increases by 3% for every °C the condensing pressure rises – shaft power consumption is directly influenced by condensing pressure. This impacts overall operating costs and plant efficiency.

Reducing condensing pressure improves compressor efficiency, but itself also requires energy. Maximum overall efficiency stems from the best possible balance between compressor energy consumption and the energy required to reduce condensing pressure.

The CP Optimiser automatically calculates this energy balance, taking into account changing loads and conditions. This paves the way to considerable savings on energy bills, which means the CP Optimiser normally pays for itself within a matter of months.

Advantages	Benefits
Automatic operation based on inputs from just two sensors – temperature and humidity	Substantial reduction in compressor energy consumption, resulting in lower operating costs
Output signal can be connected directly to PLCs and frequency converters	Easy to integrate with modern monitoring and control systems to ensure maximum efficiency
No time-consuming programming or complicated technical set-up required	Easy to commission and operate, and helps eliminate human error
No manual intervention or special operator skills required	Virtually no maintenance, calibration or attention necessary after commissioning
No special requirements for integration into new or existing R717-based refrigeration set-ups	Straightforward, inexpensive way to boost operating efficiency and reduce running costs

Where it's used

The CP Optimiser is highly recommended for inclusion in all new installations.

Installing the CP Optimiser in existing installations provides immediate savings on electricity costs.

The CP Optimiser works with the following equipment:

- Evaporative condensers
- Air-cooled condensers
- Open cooling towers.

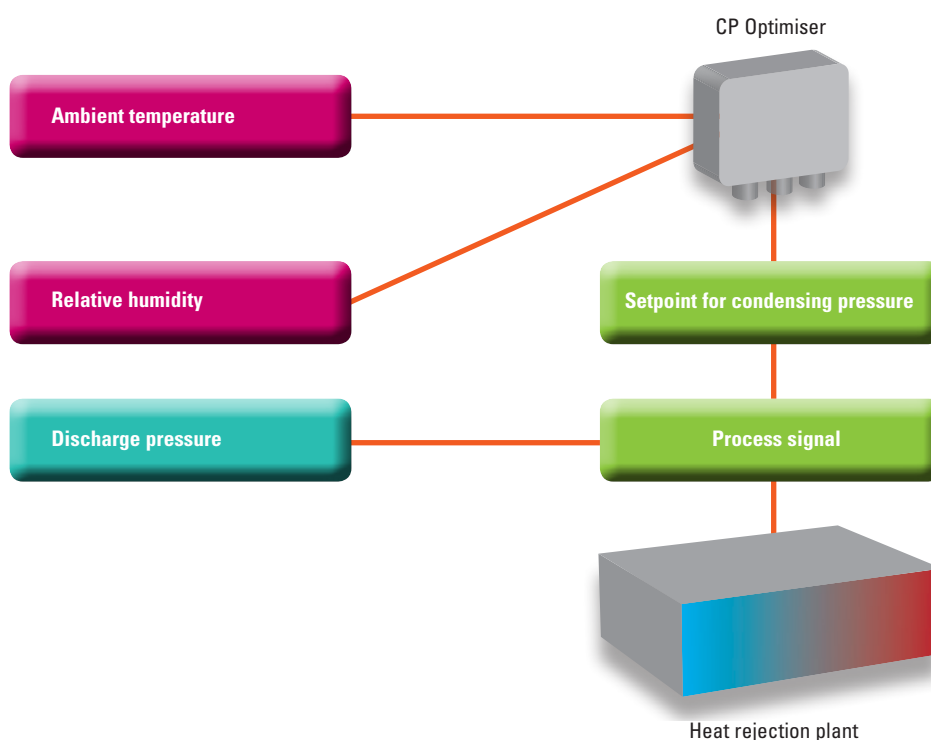

It can also be configured for use with other types of equipment, by request.

Mounting

The CP Optimiser unit is a small box of electronics that is easy to mount in virtually any convenient location, either indoors or outdoors.

The unit only requires a 24-volt DC power supply and data from appropriate sensors for measuring temperature and relative humidity.

Integration of the CP Optimiser

Supply voltage	24-volt DC
Inputs	Temperature 4–20 mA/0–50°C
Relative humidity	4–20 mA/0–100% RH
Outputs	Setpoint signals normally 4–20 mA or 0–10 volt DC
Dimensions (H x W x D)	115 x 90 x 55 mm
Enclosure	IP54
Cable connections	4 x PG7

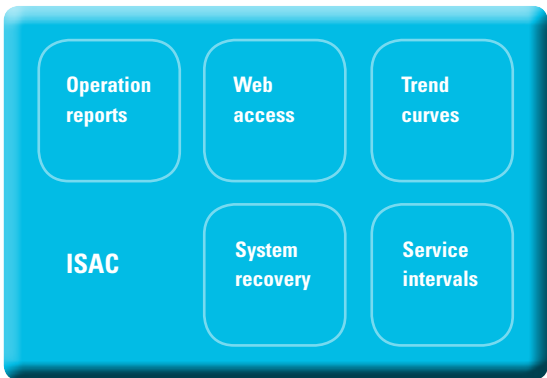

Temperature and relative humidity sensors are not included with the Sabroe CP Optimiser, but are available as optional equipment.
Controller (PLC) not included.

Sabroe Integrated Standard Automation Concept (ISAC)

Monitoring and control interface configuration system for industrial refrigeration installations

ISAC is a unique Sabroe software tool for designing and configuring refrigeration control and monitoring set-ups of virtually all kinds. It provides an effective way to integrate SCADA graphics with PLC functionality in order to ensure effective, reliable monitoring and control of both large and small industrial refrigeration installations.

ISAC modules provide standardised, pre-vetted solutions for almost any installation, based on consistent, industry-standard data inputs and outputs that ensure seamless, glitch-free exchanges of data between many different kinds of equipment, regardless of capacity, configuration or manufacturer.

Tablet with web access works as ISAC interface

Advantages	Benefits
Extensive Sabroe practical experience is embedded in all ISAC modules	Ensures rapid, cost-effective application of best practise
All modules are designed as modular building blocks and based on standardised interfaces and data exchange configurations	Minimises time required for design, planning, configuration and service
Each module designed and tested individually to eliminate technical incompatibilities	Greater safety, greater reliability and lower operating costs
Supports a wide range of standard configurations, ranging from single touch screens to multiple workstations	Easy to scale to the exact functionality required
Based on standardised components with a very high degree of documentation, for maximum consistency and efficiency	High saving potential on commissioning, running in and system optimisation, as well as on energy consumption

Compatibility/integration

The Sabroe ISAC system is easily scaleable to meet a broad spectrum of possible refrigeration plant configurations, and to give the best match with the performance and technical requirements of each individual installation.

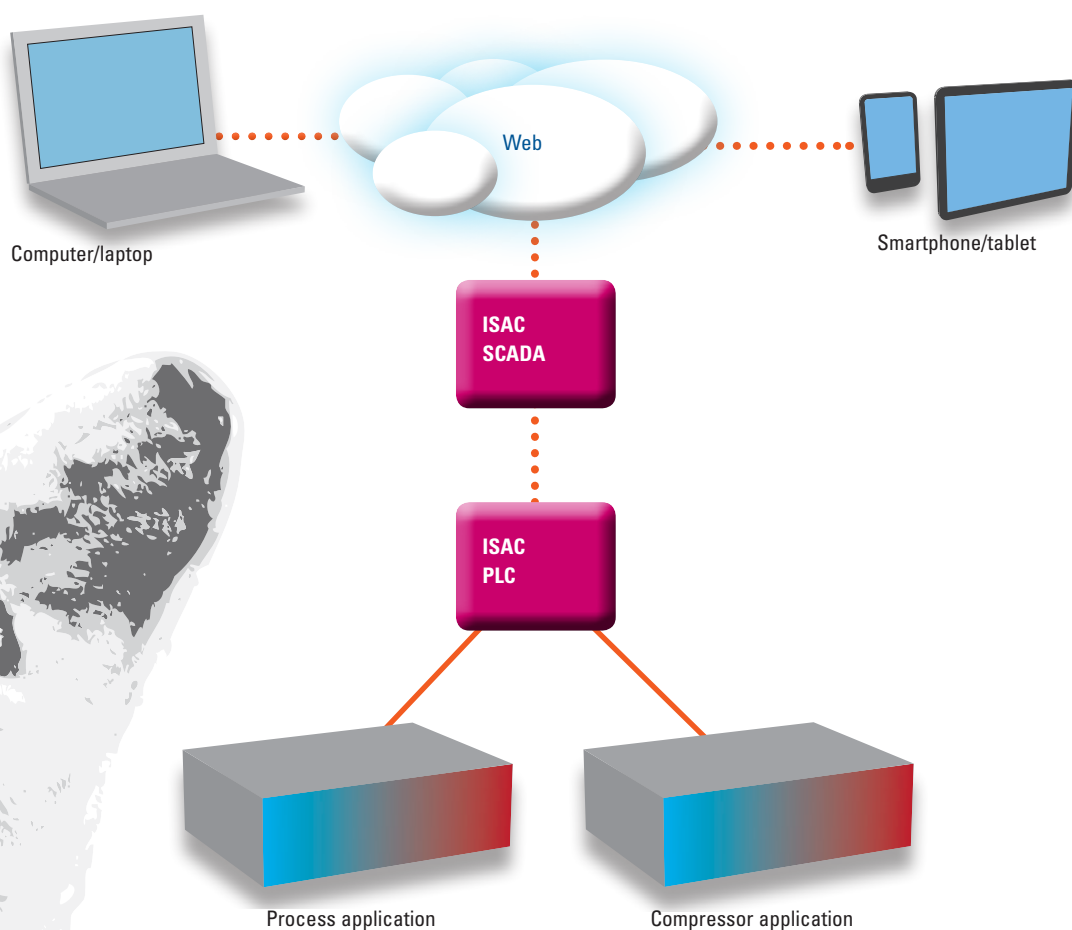

At the same time, any subsequent plant modifications or extensions will build on and integrate into the original ISAC monitoring and controls configuration package.

ISAC provides some of the following standard components:

- Multiple compressor interfaces
- Flexible cold stores main options
- Defrost queue management
- Conditional setpoints and neutral zones
- Smart compressor sequencing control.

The ISAC system is fully integrated with the iRIS remote monitoring system. The software structure is compatible with the exchange of data between these two systems without any time-consuming software updates.

ISAC is based on – and completely compatible with – industry-standard Siemens S7 hardware and GE IFIX Proficy SCADA software.

Sabroe Intelligent Remote Information Services (iRIS)

Intelligent reporting and documentation system for optimising plant performance

Intelligent Remote Information Services (iRIS) is a unique Sabroe software platform (managed by Johnson Controls) that registers, captures and collates performance data from all types of industrial refrigeration and thermal transfer equipment.

The iRIS system processes data such as:

- Load distribution and power consumption
- Performance patterns and fluctuations over time
- Statistics for shutdowns and alarms to reveal any irregularities in operation
- Comparisons and benchmarking between the different plants in a company, and operations in different countries.

The iRIS system is part of a complete service concept, working on the basis of information collected and structured by the iRIS server to form different reports and services. These are available by subscription, tailored to the requirements of each individual installation.

Advantages	Benefits
Reliable, comprehensive operating data documenting what is actually happening in the refrigeration installation	Best possible basis for streamlining and optimising operations based on documented facts
Performance and energy consumption benchmarks on a comparative basis	Greater capacity, reduced energy consumption and better plant performance
More cost-effective operations and solid facts for maintenance and extension	Solid operating data as the basis for decisions about new investment and new equipment configurations
Identifying potential problems and inefficiencies before they give rise to disruption	Predictive maintenance and lower service costs
Analysis and guidance by refrigeration technology experts	Access to world-class technical assistance and optimisation knowledge

Compatibility/integration

The iRIS software platform can be adapted to a wide range of refrigeration systems, right from individual compressors to complete refrigeration plants, and is equally well suited for new installations and existing plants.

iRIS is designed to interface seamlessly with Unisab III compressor controllers and plant control systems designed using ISAC toolbox modules. It is also possible to integrate with other systems where data are made available.

Advantages of comparative analysis

The ground-breaking iRIS platform enables owners and operators of refrigeration systems to benefit from solid comparative data, built up over an extended period. This valuable data is automatically stored, structured and presented so that it can be interpreted and applied by Johnson Controls refrigeration technology experts, to tweak and streamline the plant's operating profile.

Customers benefit from direct access to all the expertise and experience available from one of the world's biggest companies in this field – and on the basis of documented performance data.

The intelligent iRIS loop

Screw or reciprocating compressor?

There is no simple answer to this constantly recurring question. Neither is best. Both technologies are viable alternatives for use in almost all installations, and both types are normally capable of doing the job.

Our sole aim is to make sure you get the best out of your particular set-up, and the best profit margins from your operations.

And to do that we can supply state-of-the-art compressors of both types, covering the full scope of normal capacities.

The criteria you have to balance normally include:

- Required capacity
- Operating conditions
- Available space
- Part-load requirements
- Temperature levels
- Energy consumption
- Choice of refrigerant
- Environmental concerns
- Maintenance issues

Variable-speed drive - only using what's needed

The vast majority of Sabroe compressor models (both reciprocating and screw types) are available with variable-speed drive (VSD) to provide stepless control of your compressor capacity.

This helps you achieve maximum cooling effect using the minimum of energy, as well as keeping operating costs to the absolute minimum. The combination of a frequency converter, a VSD motor and the Unisab III integrated systems controller makes it possible to run the drive motor at speeds that match the load at any given time.

This enables you to reduce energy costs by as much as 30% compared with traditional fixed-speed compressors.

Sabroe compressor programme

Sabroe CMO reciprocating compressor units

Small single-stage compressors with swept volumes of 100–270 m³/h

CMO compressor units are small units specially designed for use in smaller-scale refrigeration installations where reliability is a particular concern, and uninterrupted service a big priority.

They are an economical, low-maintenance solution for smaller-scale, heavy-duty refrigeration installations, and are most commonly used as stand-alone units operating at full load, or as small back-up compressors.

Range

Six different models are available to provide swept volumes of between 97 and 273 m³/h.

CMO 24 reciprocating compressor unit
with Unisab III systems controller

Advantages	Benefits
High coefficient of performance (COP), with excellent performance even under part-load conditions	Low power consumption, which greatly reduces operating costs
Special design ensures low noise and vibration	Wider range of possible mounting locations, and minimal expenditure on noise attenuation systems
Variable-speed drive (optional) provides stepless capacity control over the entire operating range	Power consumption and operating costs kept to a minimum
Repairs can be undertaken <i>in situ</i> , without removing the compressor	Lower repair costs and less downtime
Easy to access for service, with limited spare parts requirements	Easy, inexpensive maintenance, which helps limit downtime and reduce operating costs

Options

- Unisab III systems controller
- Variable-speed drive line (Unisab always included)
- Gauges, thermometers and temperature/pressure control switches
- Extended cylinder capacity control
- Oil level regulator (for use in parallel systems)
- ATEX-compliant configuration
- Oil separators with coalescing element
- Special vibration dampening.

CMO 28 reciprocating compressor block with gauges

Model	Number of cylinders	Swept volume at 1500 rpm	Swept volume at 1800 rpm	Nominal capacities in kW at 1500 rpm					Dimensions in mm			Weight excluding motor	Sound pressure level at 1500 rpm

Sabroe SMC reciprocating compressor units

Large single-stage compressors with swept volumes of 200–1350 m³/h

SMC compressor units are ideal for use in medium-sized refrigeration installations where reliable service is a major priority. They are particularly effective under part-load conditions.

Sabroe SMC compressors are world-renowned for their exceptional reliability, making them an economical, low-maintenance solution for heavy-duty refrigeration, using all common refrigerants.

Range

Fifteen different models are available to provide swept volumes of between 226 and 1357 m³/h.

SMC 108 single-stage reciprocating compressor unit with Unisab III systems controller

Advantages	Benefits
High coefficient of performance (COP), with excellent performance under part-load conditions	Low power consumption, which greatly reduces operating costs
Variable-speed drive (optional) provides stepless capacity control over the entire operating range	Power consumption and operating costs kept to a minimum
Repairs can be undertaken <i>in situ</i> , without removing the compressor	Lower repair costs and less downtime
Easy to access for service, with limited spare parts requirements	Easy, inexpensive maintenance, which helps limit downtime and reduce operating costs
Special oil separator design based on coalescer technology	Low oil carry-over, which cuts back on oil costs

Options

- Unisab III systems controller
- Variable-speed drive line (Unisab always included)
- Gauges, thermometers and temperature/pressure control switches
- Extended cylinder capacity control
- Oil level regulator (for use in parallel systems)
- ATEX-compliant configuration
- Special vibration dampening.

Sabroe HPO/HPC high-pressure reciprocating compressor units

High-pressure versions of CMO and SMC reciprocating compressors, with swept volumes of 100–450 m³/h

The blocks of the compressor units in the HPO/HPC range are cast in high-strength ductile iron, making them particularly strong and capable of operating under exceptionally high pressures. Max. discharge pressures: up to 40 bar for HPC units and 50 bar for HPO units. Max. suction pressure: 26 bar (for both HPC and HPO).

This results in condensing temperatures of up to 70°C, and makes HPO/HPC compressors ideal for use in conjunction with heat pumps and hot water applications, and as an extra “supercharge” stage in traditional ammonia plants.

Range

Six different models are available to provide swept volumes of between 97 and 452 m³/h.

HPO 24 single-stage reciprocating compressor unit (50 bar) with Unisab III systems controller

Advantages	Benefits
High coefficient of performance (COP), with excellent performance under part-load conditions	Low power consumption, especially under part-load conditions. This greatly reduces operating costs
Variable-speed drive (optional) provides stepless capacity control over the entire operating range	Power consumption and operating costs kept to a minimum
Provides exceptionally high condensing temperatures – up to 70°C	Matches radiator temperature in most domestic/commercial heating systems, making HPO/HPC units ideal in district heating, etc
Designed for easy service access, and repairs can be undertaken <i>in situ</i> , without removing the compressor	Lower repair and maintenance costs, and less downtime
Special oil separator design based on coalescer technology	Low oil carry-over, which cuts back on oil costs

Options

- Variable-speed drive line
- Gauges, thermometers and temperature/pressure control switches
- Extended cylinder capacity control
- ATEX-compliant configuration
- Special vibration dampening.

Sabroe TCMO/TSMC two-stage reciprocating compressor units

Two-stage versions of CMO and SMC reciprocating compressors, with swept volumes of 150–1000 m³/h

Sabroe TCMO/TSMC two-stage reciprocating compressors are an economical operating alternative to single-stage compressors in smaller low-temperature refrigeration installations.

TCMO/TSMC compressor units are also ideal for medium-size industrial refrigeration installations that involve a big temperature range, such as freezer installations. Furthermore, these units are easy to customise with intermediate cooling systems.

Using a two-stage set-up built together as a single unit helps avoid equipment duplication – and thus reduce costs and save space.

Range

Eight different models are available to provide swept volumes of between 146 and 1018 m³/h.

TSMC 108 two-stage reciprocating compressor unit with intermediate cooling system and Unisab III systems controller

Advantages	Benefits
Splitting the temperature lift into two separate stages reduces overall energy consumption	Two-stage installations are relatively cost-effective, which helps reduce energy costs
Relatively small footprint	Can be installed in relatively small locations, or where space is limited
High coefficient of performance (COP), with excellent performance under part-load conditions	Low power consumption, which greatly reduces operating costs
Variable-speed drive (optional) provides stepless capacity control over the entire operating range	Power consumption and operating costs kept to a minimum

Options

- Unisab III systems controller
- Gauges, thermometers and temperature/pressure control switches
- Oil level regulator (for use in parallel systems)
- ATEX-compliant configuration
- Special vibration dampening.

Intermediate cooling systems (optional)

In plants with multiple two-stage compressors, TCMO/TSMC units can be connected to a shared intermediate cooler, in a separate installation.

Alternatively, a range of built-on intermediate cooling systems are available, as optional equipment.

- Injection inter-stage gas cooling without liquid sub-cooling
- Injection inter-stage gas cooling with liquid sub-cooling in a shell-and-tube heat exchanger
- Closed flash inter-stage cooling in a shell-and-coil intermediate cooler, with liquid sub-cooling in the coil.

Sabroe SABflex™ screw compressor units

Small screw compressor units with swept volumes of 160–950 m³/h

Sabroe SABflex screw compressors are specially designed for installations where the requirements for refrigeration capacity vary over time. These smaller-size units are optimised to ensure exceptional part-load performance as well as the best possible energy efficiency.

Everything about these units is configured for use with variable-speed drive (VSD), doing away with the traditional capacity slider and ensuring skip-free performance across the entire 1,000–6,000 rpm capacity range.

The VSD drive can be mounted on the unit, or separately in an appropriate switchboard room.

Range

SABflex units are available to provide swept volumes of 160–950 m³/h at 6000 rpm using a high-speed motor, or 160–570 m³/h at 3600 rpm using a standard motor.

SABflex screw compressor unit

Advantages	Benefits
Stepless, skip-free capacity control ensures that output always matches requirements	Lowest possible operating costs and rapid return on investment
Consistently high performance at both full and part load	Maximum part-load efficiency and low life cycle costs
Uncomplicated design with fewer moving parts and very low vibration	Exceptional reliability and low maintenance costs
Supports Condition Based Service (CBS) schedules and the Sabroe Block Swap Concept	Optimised service/maintenance intervals, and unscheduled downtime minimised
Standardised electrical panel and drive line, factory tested prior to delivery	Rapid commissioning and maximum in-service reliability

Options

- Thermosyphon and water-cooled oil coolers, with 3-way oil temperature control valve
- Complete economiser systems
- Demand oil pump – controlled by Unisab III systems controller.
- Dual Super-filter™ oil filters.

Only for use with ammonia (R717) as refrigerant.

SABflex screw

Sound pressure levels in free field over reflecting plane and one metre distance from the unit.

Sabroe SAB screw compressor units

Small single-stage compressors with swept volumes of 200–1000 m³/h

Sabroe SAB screw compressors are designed and configured to tackle smaller-scale industrial refrigeration requirements where a combination of exceptional reliability, high performance and low operating costs is essential.

These small units can be used with all the most common refrigerants and process gases, and all the components are selected for good accessibility and ease of service, ensuring cost-effective maintenance.

Range

Eight different models are available to provide swept volumes of 204–1016 m³/h.

SAB 151 screw compressor unit with Unisab III systems controller

Advantages	Benefits
Variable-speed drive and stepless capacity control ensure that capacity is always adjusted to suit requirements	Maximum part-load efficiency and lowest possible operating costs
SAB screw compressor units are all equipped with a Unisab III systems controller	More efficient operating profile, less downtime and longer service life
Cold Start™ valve lubricates the compressor, with no oil pump needed	Lower operating costs and less maintenance
SuperFilter II™ oil filter captures 99% of all particles larger than 5 microns	Longer bearing life, providing maximum reliability and savings on both maintenance and replacement
Space-saving design with small footprint	Significant reductions in space requirements

Options

- Variable-speed drive
- Thermosyphon and water-cooled oil coolers, with 3-way oil temperature control valve
- Liquid injection oil cooling (EZ Cool™)
- Dual SuperFilter II™ oil filters (on SAB 151 models only)
- Complete economiser systems
- Demand oil pump – controlled by Unisab III systems controller
- Sensors and transmitters for control by external PLC systems.

3000 rpm at 50 Hz.

3600 rpm at 60 Hz or VSD.

Sound pressure levels in free field, over reflecting plane and one metre distance from the unit.

Sabroe SAB screw compressor units

Large single-stage compressors with swept volumes of 850–10900 m³/h

The bigger models of Sabroe SAB screw compressors are specifically engineered to deal with larger-scale industrial refrigeration installations in which requirements prioritise exceptional reliability, high performance and low operating costs. All the components are designed and configured to ensure low maintenance costs as a result of good accessibility and ease of service.

Like their smaller counterparts, these large-capacity compressor units can be used with all common refrigerants and process gases.

Range

Thirteen different models are available to provide swept volumes of 838–10864 m³/h.

SAB 233 screw compressor unit
with Unisab III systems controller

Advantages	Benefits
Variable-speed drive and stepless capacity control ensures that capacity is always adjusted to suit requirements	Maximum part-load efficiency and lowest possible operating costs
SAB screw compressor units are all equipped with a Unisab III systems controller	More efficient operating profile, less downtime and longer service life
Cold Start™ valve lubricates the compressor, with no oil pump needed	Lower operating costs and less maintenance
SuperFilter II™ oil filter captures 99% of all particles larger than 5 microns	Longer bearing life, providing maximum reliability and savings on both maintenance and replacement
Space-saving design with small footprint	Significant reductions in space requirements
Compact oil separator	Highly efficient oil carry-over as a result of two-stage separation

Options

- Variable-speed drive
- Thermosyphon and water-cooled oil coolers, with 3-way oil temperature control valve
- Liquid injection oil cooling (EZ Cool™)
- Dual external oil filters (SuperFilter II™ type)
- Complete economiser systems
- Demand oil pump – controlled by Unisab III systems controller
- Sensors and transmitters for control by external PLC systems.

Nominal capacities are based on 3000 rpm.

3000 rpm at 50 Hz.

3600 rpm at 60 Hz or VSD.

Sound pressure levels in free field, over reflecting plane and one metre distance from the unit.

Sabroe SAB 157 HR high-pressure screw compressor units

Variable-speed high-pressure screw compressor units with swept volumes of 100–600 m³/hour, for use with CO₂ as refrigerant

These unique high-pressure compressor units are ideal for low-temperature two-stage freezer installations, such as carbon dioxide–ammonia (R744–R717) cascade refrigeration systems. The 52 bar configuration makes it possible to undertake freezing and defrosting in one single stage with condensing temperatures up to 15°C.

The game-changer SAB 157 HR design radically shifts the boundaries between low-stage and high-stage refrigeration, by keeping the inter-stage temperature above 0°C so that the thermal energy in the discharge gas can be used to defrost the cooling element (hot gas defrosting).

This in turn makes it possible to make big saving on installation, piping and compressor costs because a single SAB 157 HR unit can replace multiple compressors using traditional refrigerants.

Right from the outset, SAB 157 HR units are designed for variable-speed operation and maximum flexibility, doing away with traditional capacity slide valves. Capacity range: 1000–6000 rpm.

SAB 157 HR high-pressure screw compressor unit

Significant advantages	Customer benefits
Stepless, skip-free capacity control ensures that output always matches requirements	Lowest possible operating costs and rapid return on investment
Consistently high performance at both full and part load	Maximum part-load efficiency and low life cycle costs ??
Unique 52 bar unit designed specifically for CO ₂ applications	Makes it possible to undertake freezing and defrosting in one stage
Space-saving small footprint, with fewer moving parts and very low vibration	Exceptional reliability and low maintenance costs
Supports Condition Based Service (CBS) schedules and the Sabroe Block Swap Concept	Optimised service/maintenance intervals, with a minimum of unscheduled downtime

Range

One model is available to provide swept volumes of 600 m³/hour at 6000 rpm.

Options

- Thermosyphon and water-cooled oil coolers, with 3-way oil temperature control valve
- Dual external oil filters

SAB 157 HR high-pressure screw compressor block

Chillers based on Sabroe core technologies

Chillers meet the demand for indirect cooling

Many industrial and commercial processes and installations require indirect rather than direct cooling. This is normally provided by special chiller units, in which a compressor – rather than acting directly – cools a secondary refrigerant that then provides the desired cooling effect.

The use of secondary refrigerants – water, glycol, brine, etc. – is increasing rapidly because of the demand for safer installations and an intense, continuous focus on energy efficiency.

Another driver lies in both national and international legislation that requires phasing out particular refrigerants because of their environmental impacts.

Meeting the demand for chillers

Sabroe therefore provides a range of energy-efficient standardised packaged chiller configurations, all based on high-efficiency Sabroe reciprocating and screw compressors that are world-renowned for their reliability.

As a result, Sabroe chillers are at the forefront of this rapidly developing specialist market.

Compliance

All Sabroe chiller units are fully compliant with appropriate major international design codes and the specifications laid down by the most common classification societies. Approval in accordance with other technical requirements, specific national legislation or other classification societies' requirements is available on request.

Sabroe chiller programme

Sabroe PAC chillers

Packaged ammonia chillers based on reciprocating compressors, with a 50–1400 kW capacity range

PAC ammonia-based chillers are fully integrated packaged units, designed to take full advantage of the many different models of ultra-reliable Sabroe reciprocating compressors. They are popular because there is such a wide range of different standard sizes, and they are also particularly easy to customise to meet specific requirements.

The integrated design, with the plate evaporator/condenser, oil separator and control system all built in, means PAC units provide exceptional refrigeration capacity while only taking up a minimum of space. They are ideal for use in indirect cooling set-ups, and in installations where it is important to use future-compatible natural refrigerants, such as ammonia.

The advanced technology and the well-matched integration of the component systems make these chillers so energy efficient that their low operating costs make them the most economical choice over the lifetime of a refrigeration plant.

Range

There are 21 different standard models in this range of packaged chillers, with capacities ranging from 45 kW to 1419 kW.

Customised configurations are also available for use with remote air-cooled or evaporative condensers, and for twin or multi-packages, designed to provide particularly large cooling capacities.

PAC 116 chiller

Advantages	Benefits
Factory-assembled, pre-tested packaged units	Easy pre-commissioning makes installation and running-in both faster and cheaper. Factory acceptance tests (FAT) available as an option
Comprehensive selection of compressor capacities, making it easier to match particular requirements	Avoid paying for greater capacity than needed
Very easy access for service	Improves safety, ensures maximum reliability and global sourcing of parts
Indirect cooling and uncomplicated flooded evaporating system, using natural ammonia (R717) only	Greater safety and outstanding reliability
Plate evaporator/condenser are easy to open and service	Routine checks/service can be carried out by operator's own staff

Options

- Variable-speed drive (VSD)
- Soft-starter or Y/D starter
- De-superheater
- Sub-cooler
- External condenser
- Control panel mounted separately
- NSPAC and PAC-S and -L models: 1800 rpm at 60 Hz or VSD
- Factory acceptance tests (FAT).

Sabroe PAC chillers

Packaged ammonia chillers based on screw compressors, with a 100–6200 kW capacity range

PAC ammonia-based chillers are fully integrated packaged units, designed to take full advantage of the many different models of ultra-reliable Sabroe screw compressors. They are popular because there is such a wide range of different standard sizes, and they are also particularly easy to customise to meet specific requirements.

The integrated design, with the plate evaporator/condenser, oil separator and control system all built in, means PAC units provide exceptional refrigeration capacity while only taking up a minimum of space. They are ideal for use in indirect cooling set-ups, and in installations where it is important to use future-compatible natural refrigerants, such as ammonia.

The advanced technology and the well-matched integration of the component systems make these chillers so energy efficient that their low operating costs make them the most economical choice over the lifetime of a refrigeration plant.

Range

There are 19 different standard models in this range of packaged chillers, with capacities ranging from approx. 109 kW to 6180 kW.

Customised configurations are also available for use with remote air-cooled or evaporative condensers, and for twin or multi-packages, designed to provide particularly large cooling capacities.

PAC 233 chiller

Advantages	Benefits
Factory-assembled, pre-tested packaged units	Easy pre-commissioning makes installation and running-in both faster and cheaper. Factory acceptance tests (FAT) available as an option
Comprehensive selection of compressor capacities, making it easier to match particular requirements	Avoid paying for greater capacity than needed
Very easy access for service	Improves safety, ensures maximum reliability and global sourcing of parts
Indirect cooling and uncomplicated flooded evaporating system, using natural ammonia (R717) only	Greater safety and outstanding reliability
Plate evaporator/condenser are easy to open and service	Routine checks/service can be carried out by operator's own staff

Options

- Variable-speed drive (VSD)
- Soft-starter or Y/D starter
- De-superheater
- Sub-cooler
- External condenser
- Control panel mounted separately
- 3600 rpm at 60 Hz or VSD
- Factory acceptance tests (FAT).

Sabroe ChillPAC™ chillers

Extremely compact packaged ammonia chillers based on reciprocating compressors, with a 100–1400 kW capacity range

ChillPAC ammonia-based chillers feature an ultra-compact format so narrow that they can even pass through a normal doorway. This is achieved by having an extra-compact shell-and-plate evaporator/condenser, oil separator and control system all built in and fully integrated into a unique vibration-resistant design.

This means ChillPAC units provide exceptional refrigeration capacity – taking full advantage of the many different models of ultra-reliable Sabroe reciprocating compressors – while only taking up a minimum of space. This makes ChillPAC units ideal in installations where space is limited, and where there are restrictions on the refrigerant charge used.

ChillPAC chillers are most cost-effective when fitted with a variable-speed drive (VSD) that makes it easy to deal with changing circumstances and different operating requirements.

Range

There are 20 different models in the standard ChillPAC range, with capacities ranging from 90 kW to 1398 kW.

ChillPAC 108

Advantages	Benefits
Factory-assembled, pre-tested packaged units based on Sabroe reciprocating compressors world-renowned for their reliability	Easy pre-commissioning makes installation and running-in both faster and cheaper. Factory acceptance tests (FAT) available (as an option)
Exceptionally compact design and fully integrated configuration results in less than half the footprint of bespoke chiller designs	Major savings on both weight and space, resulting in lower installation costs. Much less need for expensive separate machinery rooms
Indirect cooling and uncomplicated flooded evaporating system, using natural ammonia (R717) only	Greater safety and outstanding reliability
Exceptional COP and outstanding part-load performance	Greater cooling effect from a smaller refrigerant charge, and optimum load structure over the entire capacity range
Refrigerant charge 50% smaller than with conventional chillers, because of special condenser/evaporator design	Higher output per unit kW/kg refrigerant, lower unit cost and lower installation costs.

Options

- Variable-speed drive (VSD)
- Soft-starter or Y/D starter
- De-superheater
- Sub-cooler
- External condenser
- Control panel mounted separately
- S and L models: 1800 rpm at 60 Hz or VSD
- Factory acceptance tests (FAT)
- Heater package for low-temperature heat pump operation
- Shunt solution for high-temperature difference.

Sabroe CAFP CO₂/ammonia freezers

Compact packaged freezer systems using reciprocating compressors, and CO₂/ammonia as refrigerant, with a 100–800 kW capacity range

The highly customised Sabroe CAFP freezer systems are based on a cascade system that combines the advantages of CO₂ on the low-temperature side and ammonia on the high-temperature side.

These packaged systems are built around Sabroe reciprocating compressors that use CO₂ as refrigerant, which gives them a significantly greater cooling capacity than corresponding compressors using ammonia. This in turn makes the low-temperature compressor much smaller, and the whole package significantly more compact than traditional two-stage ammonia-based freezer systems.

As a result, each standard CAFP package can be fitted inside a standard 20-foot shipping container, if required. This does away with the need for a special machinery space, and the freezer installation can easily be moved if required. Compared with conventional ammonia-based two-stage or single-stage systems with economisers, a CAFP unit uses significantly less power in the temperature range down to –55°C. This results in energy savings of as much as 15% compared with traditional two-stage ammonia systems, and up to 45% compared with single-stage set-ups.

CAFP unit controlled and monitored by Unisab III systems controller

Advantages	Benefits
Compact design that fits inside a standard 20-foot container	Big savings on installation costs
High COP and extremely low power consumption, even at part load	Low operating costs
Use of CO ₂ as low-temperature refrigerant reduces piping complexity and costs	Reduces installation costs
Very small ammonia charge, located on the unit itself	No risk of ammonia leaks in production areas, cold stores and working areas
CO ₂ is a simple, inexpensive natural refrigerant	Low operating costs

Range

There are 6 standard models in this range of freezer systems, with capacities ranging from 87 kW to 793 kW.

All CAFP units are operationally tested with refrigerant before dispatch. Factory acceptance tests (FAT) available.

Standard equipment

- Double control panel including Unisab III systems controller
- CO₂ pump separator including two pumps (one standby)
- Shell-and-tube cascade cooler with double-tube sheet to minimise any risk of CO₂ and ammonia mixing
- Standstill cooling unit, with separate control panel and power supply, to limit CO₂ pressure
- Automatic oil recovery system in both circuits
- Water-cooled condenser (plate heat exchanger type) on ammonia side
- Insulation of all cold parts.

Options

- Variable-speed drive
- Titanium plates in condenser
- Oversized CO₂ pump separator for high CO₂ evaporator volume
- Oversized CO₂ pumps for higher circulation rate
- Oversized ammonia condenser for higher cooling water temperature
- Fully welded shell-and-tube cascade cooler
- External interstage load, including a brine cooler on the R717 side of the cascade cooler.
- Special version for use with remote condenser
- Configurations for use with HCFC refrigerants instead of ammonia.

Compliance

All Sabroe chiller units are fully compliant with appropriate major international design codes and the specifications laid down by the most common classification societies.

Approval in accordance with other technical requirements, specific national legislation or other classification societies' requirements is available on request.

Sabroe SAB-light™ air-cooled chillers

Compact air-cooled chillers for outdoor installation, based on a screw compressor, with a 130–430 kW capacity range

The SAB-light air-cooled chiller is a particularly compact design that uses V-coil condensers to substantially reduce the overall footprint. The screw compressor and fully brazed plate heat exchanger are mounted underneath the V-coils, resulting in a height of 2.9 m and a width of only 1.3 m.

SAB-light units provide a cost-effective alternative to traditional air conditioning, chilled rooms and industrial/process refrigeration. They are designed for quiet running and outdoor operation, and a special ultra-low-noise version is available.

SAB-light uses a small propane refrigerant charge, providing an attractive, economical and environmentally responsible alternative to air-cooled chillers that use HFCs as refrigerant.

Range

There are 6 standard models in this range of air-cooled chillers, with capacities ranging from 129 kW to 428 kW.

SAB-light air-cooled chiller

Advantages	Benefits
Compact design with small footprint	Easy to mount outdoors – no special machinery room required
Quiet while running Available in both low and ultra-low noise versions	Can be placed close to occupied buildings
Variable-speed drive fitted to both compressor and fans, providing very high coefficient of performance (COP), even under part-load conditions	Low power consumption, which means low operating costs
Designed for maximum safety, with very small natural refrigerant charge (propane R290)	No expenditure on special safety precautions
Easy to mount, install and connect up	Low installation costs and rapid commissioning
Straightforward, uncomplicated construction	Low maintenance costs

Standard equipment

- Control and monitoring system
- Variable-speed drive
- Hot-dip galvanised base frame
- Screw compressor
- Precharged with refrigerant.

Options

- External communication via network and industrial-standard bus systems
- Evaporator heating elements for frost-proofing
- Epoxy coating of condenser surface
- Oil cooler
- Models operating with inlet temperatures below 0°C available on request.

Compliance

All SAB-light air-cooled chillers are fully compliant with PED (CE marked and PED approved). Approval in accordance with other classification societies is available on request.

SAB-light air-cooled chiller

Capacities are nominal and based on water temperature 12/7°C, ambient temperature 30°C. Two or more units can be built together if larger capacities are required.

ESEER = European Seasonal Energy Efficiency Ratio (Eurovent Institute, Europe).

Fans and VSD are included in the power consumption.

Sound pressure levels in free field, over reflecting plane and 10 m distance from the unit.

Heat pumps based on Sabroe core technologies

Heat pump pioneer

Sabroe is one of the world's leading suppliers of heat pump systems for commercial and industrial use. We were one of the pioneers of the whole idea of the energy benefits to be reaped from using heat pumps in industry – long before they became greentech-fashionable.

Sabroe HeatPAC heat pumps are the ideal solution for effectively exploiting low-temperature waste heat, and turning it into hot water (up to 90°C), using only a minimum of electrical energy.

Ammonia as refrigerant

Sabroe industrial heat pumps use natural ammonia (R717) as refrigerant. Each unit is customised for the specific use and the particular installation, making sure that a minimum of thermal energy is used to provide maximum effect.

Customised two-stage
heat pump

Sabroe heat pump programme

Heat pumps

Sabroe HeatPAC heat pumps

Ammonia-based heat pumps using a reciprocating compressor, with a 240–1200 kW capacity range

HeatPAC units are extremely compact heat pumps based on ultra-reliable Sabroe HPO/ HPC high-pressure reciprocating compressors, using ammonia as refrigerant. They are usually most cost-effective when fitted with a variable-speed drive (VSD) that makes it easy to deal with changing circumstances and different operating requirements. These highly customisable integrated units are based on a unique vibration-resistant design, featuring an uncomplicated flooded evaporating system. They provide exceptional heat pump capacity from the smallest possible footprint, and with only a very small refrigerant charge.

Sabroe HeatPAC heat pumps are the ideal solution for effectively exploiting low-temperature waste heat, and turning it into hot water (up to 70°C), using only a minimum of electrical energy. These units are designed to provide a cost-effective way to tackle needs for cooling and heating at the same time, providing an extremely high coefficient of performance (COP).

Range

There are 6 standard models in this range of heat pump systems, with capacities ranging from 240 kW to 1149 kW.

HeatPAC 108

Advantages	Benefits
Factory-assembled, pre-tested packaged units based on Sabroe reciprocating compressors world-renowned for their reliability	Easy pre-commissioning makes installation and running-in both faster and cheaper
Integrated configuration weighs less, and has less than half the footprint of bespoke heat pump designs	Low installation costs. Easy to mount even in confined spaces or unconventional locations
Indirect cooling and an uncomplicated flooded evaporating system, using natural ammonia (R717) only	Greater safety and outstanding reliability
Exceptional COP and outstanding part-load performance	Low operating costs
Refrigerant charge 50% smaller than with conventional heat pumps, because of special condenser/evaporator design	Higher output per unit kW/kg refrigerant, lower unit cost and lower installation costs

Options

- Cascade evaporator
- Variable-speed drive (VSD)
- Soft-starter or Y/D starter
- De-superheater
- Subcooler
- Control panel mounted separately
- HeatPAC 24, 26 and 28: 60 Hz or VSD
- Factory acceptance tests (FAT).

Compliance

All HeatPAC heat pumps are fully compliant with appropriate major international design codes and the specifications laid down by the most common classification societies.

Approval in accordance with other technical requirements, specific national legislation or other classification societies' requirements is available on request.

Unisab control for heat pump application

Heat pumps

Condenser water inlet +64°C, outlet +70°C
Evaporator water inlet +39°C, outlet +34°C

Type	Heating capacity kW	Cooling capacity kW	Power consumption kW	COP heat	R717 charge kg	Dry weight kg	Dimensions in mm			Sound level dB(A)

Sabroe HeatPAC heat pumps

Ammonia-based heat pumps using a screw compressor, with a capacity of up to 1800 kW

HeatPAC units are extremely compact heat pumps based on ultra-reliable Sabroe high-pressure screw compressors, using ammonia as refrigerant.

These highly customisable integrated units, featuring an uncomplicated flooded evaporating system, provide exceptional heat pump capacity from the smallest possible footprint, and with only a very small refrigerant charge. They are designed to provide a cost-effective way to tackle needs for cooling and heating at the same time, providing an extremely high coefficient of performance (COP).

Sabroe HeatPAC heat pumps are the ideal solution for effectively exploiting low-temperature waste heat, and turning it into hot water (up to 90°C), using only a minimum of electrical energy.

Sabroe HeatPAC heat pumps provide considerable scope for customisation to meet specific customer requirements.

HeatPAC 157 HR

Advantages	Benefits
Factory-assembled, pre-tested packaged units based on Sabroe screw compressors world-renowned for their reliability	Easy pre-commissioning makes installation and running-in both faster and cheaper. Factory acceptance tests (FAT) available as an option
Integrated configuration weighs less, and has less than half the footprint of bespoke heat pump designs	Low installation costs. Easy to mount even in confined spaces or unconventional locations
Indirect cooling and an uncomplicated flooded evaporating system, using natural ammonia (R717) only	Greater safety and outstanding reliability
Exceptional COP and outstanding part-load performance	Low operating costs
Refrigerant charge 50% smaller than with conventional heat pumps, because of special condenser/evaporator design	Higher output per unit kW/kg refrigerant, lower unit cost and lower installation costs

Options

- Cascade evaporator
- Control panel mounted separately
- Factory acceptance tests (FAT).

Compliance

All HeatPAC heat pumps are fully compliant with appropriate major international design codes and the specifications laid down by the most common classification societies.

Approval in accordance with other technical requirements, specific national legislation or other classification societies' requirements is available on request.

The HeatPAC 157 HR is a versatile heat pump that can cope with a wide range of operating conditions. These units are particularly efficient under part-load conditions due to the variable speed drive (1000–6000 rpm) fitted as standard.

Each unit is specially configured to comply with the specific set of operating conditions, in order to ensure the most effective exploitation of the waste heat available.

HeatPAC 157 HR											
Cold side					Hot side						
	Temperature in °C	Temperature out °C	Flow m³/h	Cooling capacity kW		Temperature in °C	Temperature out °C	Flow m³/h	Heating capacity kW	Power motor kW	COP

Water	30	26.8	300	1107	Water	40	85	28.2	1453	381	3.8
Water	20	17.6	300	818	Water	40	85	22.0	1121	335	3.3
Water	10	8.3	300	588	Water	40	85	16.5	852	290	2.9

Capacities are nominal at 6000 rpm. Specific capacity must be calculated for actual running conditions.

Sabroe End-of-Line Test Centre

Full satisfaction – no surprises

Not only are Sabroe systems at the forefront of industrial refrigeration technology, they're also backed by state-of-the-art facilities for pre-delivery, pre-commissioning testing.

We rigorously test the performance of every unit before it leaves the factory, so you can be 100% sure it lives up to your expectations in full when it arrives. You're entitled to expect full transparency – and we make sure Sabroe systems deliver.

Testing in the factory – not on site

The unique Sabroe End-of-Line (EOL) Test Centre, located in Denmark, is a purpose-built facility comprehensively spec'ed with state-of-the-art monitoring and testing equipment.

We can conduct a comprehensive range of tests, ranging from full-blown Factory Acceptance Tests (FAT) to any specific test package you may prefer. You and your staff are, of course, welcome to witness every stage of tests and trial runs to make sure everything performs as intended, with no unwelcome surprises.

Documented capabilities

Rigorous pre-commissioning testing gives you comprehensive, reliable documentation of the performance and capabilities of the exact equipment you'll be receiving – not just generic approximations.

The Sabroe brand has been in this business
ever since 1897 – and development continues

We have proved we can repeatedly and consistently deliver on our customers' needs – no matter how big and complex, or how small and sensitive.

We listen to what your real challenges are, and what you really want. And then we focus more than a century of specialist know-how on how best to achieve it.
